

Says

- I want a controller that is not too sensitive and is easy to use
- Likes to play platformers and infinite runners
- Likes PC games
- Limb mobility is declining

Thinks

- I would like to be able to play the games I love with ease
- I hope you can make something that will allow me to play games again
- I hope its not too hard to create a game controller

Does

- I like having freedom to be able to use my controller how I like
- I usually stick with what I have until I find something better
- I don't always research possible solutions to my problems

Feels

- Persistent: Attempt to work with what I already have
- Worried: Afraid that I can no longer play games due to my condition
- Excited: When I find something that works well

Hello Anna.

I would like to ask what you think of the idea of using a glove to be able to control your games by moving your arm around. Do you believe this would work for you or are you unable to move your arms well enough?

Regards,

Jason O'Toole

to me 🔻

Hi Jason

I love the idea. Please keep in mind I find fine movement difficult but I can easily do large movements.

Anna

Dear Ben Jones,

I have written to Anna regarding the controller I am designing for her, the design I am going for is a glove that controls her game when she moves her arm in different directions. She responded saying she loves the idea but I am concerned about her arm and her condition. When using the glove she will most likely be holding her arm up and moving it around for prolonged periods of time, I wanted to check with you to see if this would be alright for her with her condition. If this idea is alright with you, I would like to know how long she is allowed to use it for so I can advise her accordingly on how long she can be playing video games for at a time without proper rest so it does not become too strenuous for her.

Regards,

Jason O'Toole

to me 🕶

Hi Jason

Anna will have no problems moving her arm around, she will fatigue in any movement but knows how to self manage and take rests. Your main concern should be her ability to perform fine movements. She can easily wave her arm from left to right, up to down etc but she can not perform tasks like touching the end of her nose with any accuracy.

Dear Ben Jones,

Thank you for letting me know, I will inform her of what you have said and let her know that she should not be overworking herself as well.

Jason O'Toole
